

# Bypass Filtration for Hydraulics and Engine Oil

**GENERATION 2**  
**FILTRATION™**  
 BY L.B.S. LUBRICATION UNITS INC.

**IS YOUR SOLUTION**

*Oil does not wear out, it just gets dirty and contaminated*

## HIGH PRESSURE SERIES

Over 80% of hydraulic failure are the result of dirty oil. We can efficiently remove water and ultra-fine wear particles missed by the standard oil filters, contamination levels are dramatically reduced.

Applications: Industrial presses, bailers, compactors, earthmoving equipment, road building equipment, ship, ferries, fishing vessels, military vehicles & equipment, pulp & paper, locomotives and industrial equipment.

- ◆ Consistently maintains oil quality cleaner than new unused oil
- ◆ Reduces water concentration to less than 100 ppm
- ◆ Maintains oil viscosity and acidity
- ◆ Prevents 'fine-tolerance valves' from sticking
- ◆ Dramatically extends oil and hydraulic component life
- ◆ Increases equipment performance and reduces downtime
- ◆ Reduces replacement part costs, maintenance costs, and associated down time
- ◆ Dramatically reduction in waste oil and disposal cost
